PLANORA

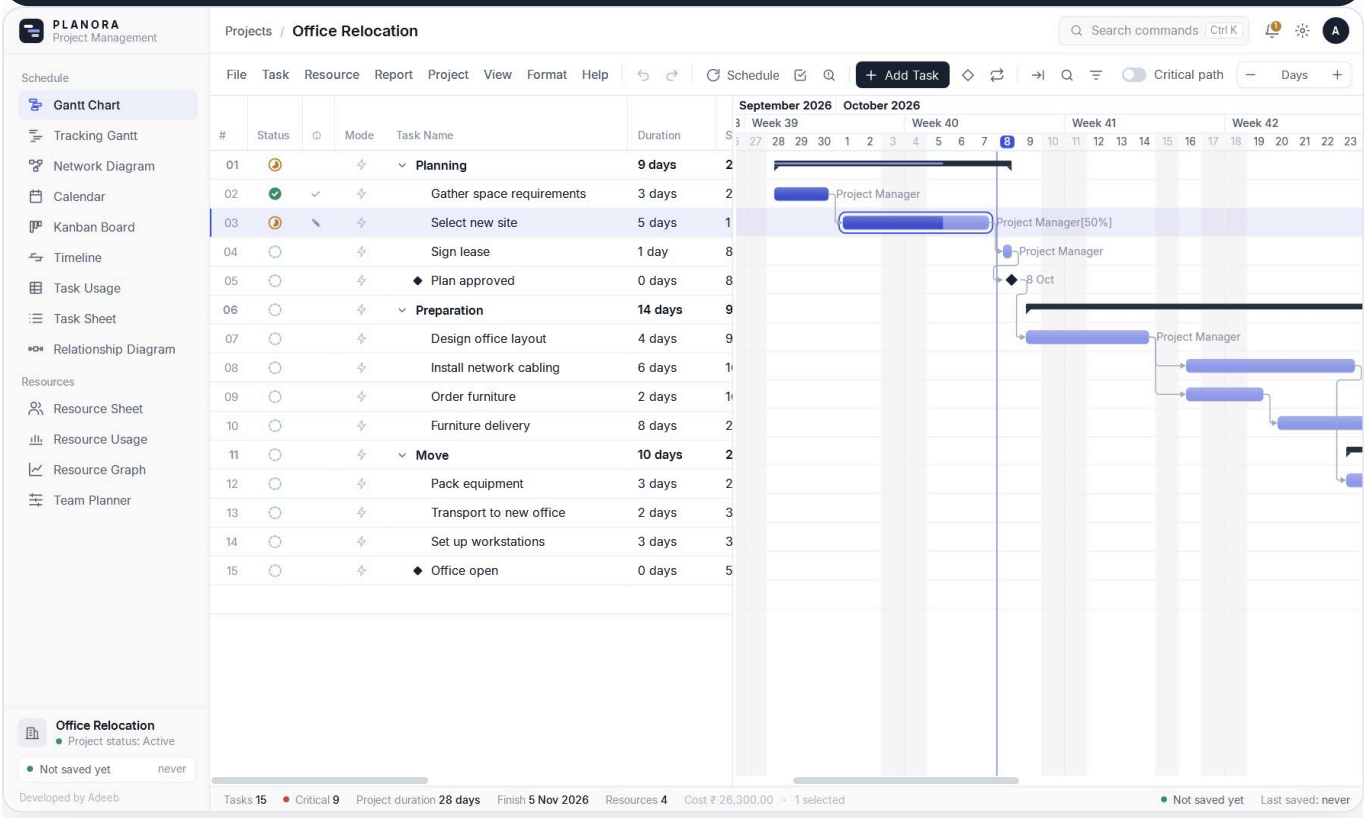

Final Test Report

Version 1.1.0 — results of automatic, real-file, user-interface, mouse and installer testing, the bugs they found, and what has not been tested yet.

Version tested
1.1.0

Test dates
6 – 12 October 2026

Test machine
Windows 11 (build 26200), .NET 8

305 / 305
automatic engine tests passed

188 / 188
task dates identical to Microsoft Project

1,879
UI steps run, 0 errors

16 / 16
real mouse & keyboard checks passed

SUMMARY

Result: all tests pass

Planora 1.1.0 passed every test in five levels of testing. Testing found 17 real bugs during development; all were fixed before release. One slow spot remains (Spelling on very note-heavy plans) and a few areas have not been tested yet (page 7).

#	Test level	What it checks	Result
1	Automatic engine tests	The calculation “brain”: dates, calendars, costs, resources, files, reports	305 / 305 pass
2	Real Microsoft Project files	Planora recalculates real .mpp plans and must get Microsoft Project's dates	188 / 188 match
3	Full user-interface sweep	Every menu command, view, table, filter, group and zoom on 6 projects	1,879 steps, 0 errors
4	Real mouse & keyboard	Dragging, resizing and linking Gantt bars, menus, Ctrl+K, sidebar	16 / 16 pass (×2)
5	Installer	Setup unpacks the program, makes shortcuts, installed copy runs	Pass

LEVEL 1

Automatic engine tests

These tests give the calculation engine a small project and check the answer, for example “a 5-day task starting Monday must finish Friday at 17:00”. All 305 run in under 20 seconds and are re-run after every change. Run on 12 October 2026: **305 passed, 0 failed, 0 skipped**.

Test group	Tests
Scheduler	23
Advanced scheduling	16
Schedule options	6
Task progress	6
Tracking	8
Task inspector	1

Clipboard & templates	5
Master projects	5
Multiple projects	2
Organizer	1
Construction test pack	5
Real .mpp files	3
Total (41 groups)	**305**

Level 2: Real Microsoft Project files

For each file, the dates Microsoft Project had saved were read from the .mpp. Planora then recalculated the whole plan with its own engine and the dates were compared task by task (equal within one minute; Microsoft Project stores seconds, Planora whole minutes).

File	Tasks	Before fixes	Final result
Advanced Analytics Microsoft Project Plan.mpp	34	23 matched	34 / 34
commercial-construction-sample.mpp	144	15 matched	144 / 144
product-development-sample.mpp	10	3 matched	10 / 10
Total	**188**	**41 matched**	**188 / 188**

The construction test pack (4 project XML files plus a parser edge-case file) also imports completely, with every task, duration and link that can be imported, and clear notes for the two links that cannot.

LEVEL 3

Full user-interface sweep

An automatic tester (`Planora.exe --uitest`) drove the real window: every view, every table, filter and group, all 8 zoom levels, and **every command in every menu**, followed by undo and redo. A watchdog closed each dialog a command opened and recorded any error message. Run on 9 October 2026, 436 seconds.

Project	Tasks	Resources	Steps	Errors
Sample project (Office Relocation)	15	4	240	0
commercial-construction-sample.mpp	144	60	240	0
Advanced Analytics Microsoft Project Plan.mpp	34	8	238	0
product-development-sample.mpp	10	5	240	0
Hospital_Construction_Advanced.xml	91	12	240	0
XML_Parser_Edge_Cases.xml	5	0	238	0
Sample project, second pass	15	4	236	0
Blank new project	0	0	207	0
Total			**1,879**	**0**

428 dialogs and windows opened and closed without errors. All message boxes were expected ones (“Do you want to save changes?”, file dialogs, and the correct refusal “cannot be indented further”). The only notes were two slow steps: **Spelling** took 3.6 s and 12.9 s on the large plans (see page 7).

Save and reopen (round trip)

Each of the five files was saved as **.planora** and as **Microsoft Project XML**, reopened, and compared: **10 of 10 round trips identical** (all task names, starts and finishes).

LEVEL 4 AND 5

Real mouse and keyboard

A second tester (`Planora.exe --mousetest`) moved the real mouse pointer and pressed real keys on the sample project. Run twice on 9 October 2026; both runs 16 / 16.

#	Check	Observed	Result
1	Drag a Gantt bar to the right moves the task later	9 Oct → 12 Oct	Pass
2	Ctrl+Z undoes the drag	back to 9 Oct	Pass
3	Drag a bar's right edge lengthens the task	4 → 5 days	Pass
4	Drag a bar's left edge sets % complete	0% → 50%	Pass
5	Drag a bar onto another task links them	link added	Pass
6	Hovering a bar shows the details card	card shown	Pass
7–8	Phase arrow collapses and expands a phase	16 → 12 → 16 rows	Pass
9	Critical path switch turns red highlighting on	on	Pass
10–11	Clicking Task opens its menu; Esc closes it	opens, closes	Pass
12–14	Ctrl+K opens search; typing “zoom in” + Enter runs it; Esc closes	zoom 4 → 5	Pass
15–16	Sidebar opens Resource Sheet and returns to Gantt Chart	views switch	Pass

Installer

Check	Result
Planora-Setup-1.1.0.exe built (self-contained, 118 MB)	Pass
Setup self-test: unpacks 598 files and creates a working shortcut	Pass
Installed Planora.exe reports version 1.1.0, publisher Adeeb, “Developed by Adeeb”	Pass
Installed copy runs on its own and opens a real .mpp file (1.0.0 installer)	Pass

BUGS

Bugs found by testing, all fixed

#	Bug	Found by	Status
1	Fixed Duration tasks were shortened to their assignments' work	Real .mpp files	Fixed
2	Milestones with resources moved to the next morning	Real .mpp files	Fixed
3	Interrupted (stop/resume) tasks were ignored	Real .mpp files	Fixed
4	A delayed assignment moved the task start instead of its finish	Real .mpp files	Fixed
5	Contractor (cost) resources were not recognised	Real .mpp files	Fixed
6	Material and cost assignments lost their stored length	Real .mpp files	Fixed
7	Contoured (hand-shaped) work was imported as flat	Real .mpp files	Fixed
8	Assignments without work made every duration zero	Construction test pack	Fixed
9	Tasks numbered 0 were dropped on import	Construction test pack	Fixed
10	Links that could not be imported disappeared silently (now reported)	Construction test pack	Fixed
11	% complete without actual dates was ignored	Construction test pack	Fixed
12	The MPXJ file reader could not read Planora's own XML files (byte-order mark)	Format tests	Fixed
13	Command search (Ctrl+K) could never close	Compiler warning	Fixed
14	Command search crashed ("...while a Window is closing") when closed with Alt+F4	UI sweep	Fixed
15	Spelling froze for about 40 s on plans with long notes (now about 8 s)	UI sweep	Fixed
16	Spelling's word scan could loop forever on some text	UI sweep	Fixed
17	A macro with an empty loop hung the program	Unit tests	Fixed

Three crashes and some failed checks during testing turned out to come from the test tools themselves (for example closing a window that a person cannot close while a file dialog is open, and aiming the mouse at bars outside the screen). Each was investigated, proven not to be a Planora bug, and the tester corrected.

OPEN ITEMS

Known limitations and what is not tested yet

Known limitations

Item	Detail
Spelling on note-heavy plans	About 8–13 s on a plan with 34 long notes (instant on normal plans); a wait cursor is shown.
Dragging past the chart edge	The chart does not scroll by itself while dragging a bar beyond its edge (Microsoft Project does).
Saving .mpp files	Not possible (closed format); Planora saves Microsoft Project XML instead.
Microsoft Project VBA macros	Not supported; Planora has its own macro language.
Installer not code-signed	Windows shows a “Windows protected your PC” warning the first time.

Not tested yet

- Printing to a real printer (print preview and PDF export were tested).
- A full install and uninstall through Windows “Installed apps” on a clean PC (the installer self-test passed).
- Opening Planora's exported XML in Microsoft Project itself.
- Resource leveling results compared with Microsoft Project's leveling on the same files.
- Use by real people over a longer period.

How to repeat these tests

Test	Command (in the Planora folder)
Engine tests	`dotnet test tests\Planora.Engine.Tests`
UI sweep	`Planora.exe --uitest log.txt [project files]`
Mouse & keyboard (moves the pointer)	`Planora.exe --mousetest log.txt`
Installer self-test	`Planora-Setup-1.1.0.exe /selftest <empty folder>`
